CASTLEY GENERAL CONSTRUCTION LTD

Castley general construction is construction company that offers large and small scale projects to achieve your dream of perfect construction. We have assembled a team of seasoned professionals to help deliver nothing but the best of service for a wide range of construction services.

With over 20 years we have developed the ability to listen and assist with innovative proposals, attending to every customers request by producing nothing but top-notch services you can be rest assured. We are well placed to help you with all your needs and want because CASTLEY GROUP has the expertise, experience and financial stability to respond quickly with the optimum solution, execute safely and see the project through to a successful conclusion.

We have extensive experience in building and renovations with a highly trained team; handling all phases of the renovation processes from emergency service, cleaning to total construction. Trust us with whatever your construction needs are and be rest assured we will always give nothing but the best. It is evident that we are well equipped with an arsenal of well experienced and vast workforce.

Our capacities give us the freedom of executing project of various sizes from small personal projects to building mega project of grand scale.

We are a reliable, trustworthy and efficient in discharging our service

WHO WE ARE

In business for over 20 years, we have a legacy of pleasing our customers from helping you choose a suitable material and style, ensuring that your project will deliver on time and with high quality.

CASTLEY GENERAL CONSTRUCTION LTD. and his expert teams are ready to work with you to develop and design the most suitable for your practical building needs.

OUR MISSION:

To develop along term relationship with our customers. Our Group policy is not to comprise with quality but to promote team work as well as safety and protection of the environment, having quality products and services and cater the industrial and building industry which is creating a good will for the company, its suppliers, distributors and dealers from the end user with out compromising on governing authorities formalities and ethics of business.

OUR PHILOSOPHY:

Ability to listen and assist with innovative proposals. Attending to every customer's request, even the most unexpected and to draw its occasion to realize something unique. The approach to the project and therefore to answer to any order and in demand specification.

To offer a consulting service, planning and assistance both to studies of engineering and architecture and to provide customers. The approach to the world that surrounds us is respect and attention because the environment is a precious commodity, and our objective is to operate the maximum one some possible efforts to improve everybody's quality of life.

CONSTRUCTION

While every corporation wants to take the lead in the marketplace, not all corporations care about how they do it.

CASTLEY GENERAL CONSTRUCTION LTD. has a long history of innovation, not just in product development, but in manufacturing safe and healthy, safe construction and healthy products.

Occupant health and productivity are coming to the forefront as issues that architects, designers and building owners need to take into consideration in the design process.

Sustainable design seeks to create structures that require fewer natural resources to build, maintain and adapt to future uses. Key strategies include choosing quality, lasting materials and creating flexible, multi-functional spaces.

Why build for sustainability? Sustainable design offers valuable benefits that are good for owners, occupants and the environment:

- * More efficient use of resources for building construction, operation and maintenance.
- * Healthier and more-productive

environments within the structure.

- * Better protection of the land at the building site and where raw materials are extracted, manufactured and disposed.

To build sustainable, building professionals must choose materials, construction details and technologies that, in addition to achieving functional and design objectives, provide environmental advantages.

Natural resources such as wood, granite, oil and gas have been drained from the ecological system by the construction industry for decades.

At Castley General Construction Ltd. our main objective is to avoid the over usage of these precious materials and replace them with products that are ecologically friendly. This has been achieved by us on numerous projects in the recent years using innovative designs which are both desirable and easily maintained without affecting the architectural designs or quality.

Our safety track record is unsurpassed. We take great pride in the fact that our health and safety standards are amongst the highest standards in the industry and are forever striving for even higher accolades. Special training schools are provided along with seminars by highly qualified instructors for both company employees and outside contractors in order to maintain maximum health and safety awareness.

"TOGETHER
WE CAN
BUILD A
BETTER
FUTURE"

ROAD CONSTRUCTION

Road Construction applications have specific needs and objectives. No one understands that better than Castley Group of Companies.

Developed to increase performance, reduce costs and enable engineers to achieve what was once unachievable, we address the demands of large-scale commercial sites as well as smaller

residential projects. Our advanced synthetics increase strength and support of loads, leading to better pavement performance and added life.

Castley Group of Companies, hands-on approach and commitment to advancement allow us to develop materials that significantly enhance your business cost-effectively and resourcefully. By looking beyond the obvious and thinking ahead rather than behind, we delivers materials that make a tangible difference in our customer's businesses. Our products improve pavement performance, base reinforcement and subgrade stabilization. Regardless of the Road Construction project, we perform measurably to solve your construction needs.

Road construction applications have specific needs and objectives. No one understands that better than Castley Group of Companies.

Developed to increase performance, reduce costs and enable engineers to achieve what was once unachievable. Our advanced geosynthetics improve base strength and support of loads, leading to better pavement performance and added life.

RENOVATION

We have extensive experience in building and renovation. We pride ourselves on our excellent and professional customer service. With a highly trained team; handling all phases of the renovation processes from emergency service cleaning to total reconstruction.

We can handle any trade work.

Know-how, Experience & Development

The attempt of the company to keep product standards high is evident throughout the whole production procedure. With its specialized and technically well-trained, it has managed to reach a level of development that any company would desire.

The careful steps in every part of the production procedure, the use of excellent quality raw materials and the developed design render MARSELLI ALUMINIUM SOLUTIONS NIG. LTD one of the most modern and reliable constructing aluminum companies.

MARSELLI ALUMINIUM SOLUTIONS NIG. LTD continues its attempt to present new and innovative products which meet the high standards and the quality level which has achieved during these 21 years of experience.

opening systems thermal
H6400
Innovative suggestions!

Having 21st century demands as criterion and energy-saving as main guide, MARSELLI ALUMINIUM SOLUTIONS NIG, LTD pioneers in the field of frame construction and presents the new series, H- 6400 Thermal. The new series of MARSELLI ALUMINIUM SOLUTIONS NIG, LTD is classified into the category of tilt - turn heat insulating systems. With fine and simple line lasting over time, it suits perfectly to the architectural character of every building, either it is about a well-built luxurious apartment building or a neoclassic house, or a shopping mall or office building. This series gives greater sense of calmness, comfort and pleasure because of the frame and guarantees excellent performance in heat and sound insulation. At the same time, the mechanism of multiple perimeteric lock, which locks' the whole leaf circumferentially of the frame, makes security one of the basic features of the system. EPDM Sealings guarantee the excellent tightness regarding water and air and the special design of the profile provide immediate water drainage.

Features and advantages:

- Flexibility in matters of taste
- Uses double glazing (up to 24mm)
- Polyamide 20mm
- Offers sound insulation
- Offers guaranteed water and air tightness
- Has a mechanism of multiple locks, by which the system locks circumferentially
- Gearbox mechanism
- The series supports **Camera Europea** mechanism
- The series has been certified with **CE**
- **EPDM** Sealings

Resistance to wind load	EN 12210 / Class 4
Water-tightness	EN 12208 / Class E1050
Air permeability	EN 12207 / Class C3/B3

aluminum railing with glass

an ornament for your house!

Features and advantages:

- Fully anodized system including spare parts, suitable for coastal constructions
- Quick construction

Railing is an ornament for every house.

Choose between MRS 8000 and MRS 8050 system in linear, modern line with transparent or colored glass which is safe, very resistant so that in case it breaks, all the pieces will stay together and there is no danger of injury, since the glass, even if broken, may stay with safety on its position until replaced. MRS 8000 series is fully anodized with a unique fixing system of high durability suitable for covering big surfaces and is combined with 8mm, 10 mm and 12mm safety glass. Ideal for terraces, balconies, stairs, fences and wherever you think it's suitable for your space. MRS 8050 system can be combined with a 16mm glass and consists of a square basis which enfolds the lower end of the glass giving the impression that the glass is free of any fixing part. Ideal for terraces, balconies or even for fences. If you wish to enjoy your view free of railings and at the same time have a fixed construction, now there is solution!

pergolas & sunshades

Forget all about wood, varnish and maintenance! The era of wooden pergola-sunshade has passed. Now the future belongs to aluminum pergolas-sunshades. Fixed or with open-close mechanism will adapt perfectly to your use and taste. Choose horizontally for an ideal pergola or vertically for a sunshade or even for building design.

OPEN-CLOSE PERGOLA-SUNSHADE

The leaves of the pergola provide the opportunity to control shade but also ventilation. By pressing a button you may open and close the leaves of the system. Water tightness offered due to integrated gutters of the leaves protect anything you have under, or even more the interior spaces by saving energy up to 15%. A very modern solution that was offered based on two criteria, functionality and high taste thus reforming a space being fully in line with the architecture of the building where the construction takes place.

FIXED PERGOLA

Fixed sunshade-pergola with aerodynamic vanes so as to avoid overheating of the interior space and protect people from solar radiation.

aluminium rolling shutters

The house for every one of us is identified with safety, calmness and relaxation from everyday stress. The exterior aluminum rolling shutter will make a significant contribution to this matter! Polyamide in combination to special section inserts offer great heat and sound insulation while at the same time provide greater safety. Besides, this is something that anyone would require for his house! With thermal break boxes, the maximum heat insulation can be reached for a rolling shutter is provided. If you wish to relax and be calm in your life, exterior rolling shutters is the best choice since you can control the light due to the design of this particular system. They offer you modern design and you can use the same color with your aluminums for perfect harmony

Features and advantages:

- High quality and taste
- Safety and excellent application
- Silent mechanism, tightness and heat insulation
- CE guarantee according to European specifications Special constructions with one, two or more partitions
- Enhanced box profiles
- ISO 9001:2008-ISO Mark.
- Heat insulation $U < 1,0 \text{ W/M}^2\text{K}$
- Maximum construction width 3m

ALUMINIUM COMPOSITE PANELS (ACP)

Aluminium Composite Panels (ACP) are mainly light-weight composite material consisting of two pre-finished aluminium cover sheets heat-bonded (laminated) to a core made of polyethylene plastic material, available in 3mm, 4mm, and 6mm thicknesses after finishing and can be curved and bent to form corners. These panels are used widely as exterior covering of commercial buildings and corporate houses.

While adding to aesthetic beauty of the structure, they are also resistant to acid, alkali salt spray, pollution and provide good thermal as well as sound insulation. These Panels are widely used due easy maintenance in almost any kind of climate through normal wash with water and mild detergent that ensures long lasting performance.

Comparative Advantages

ACP Cladding - the world's original Aluminium Composite Material (also known as Aluminium Composite Panel or ACP) since 1966 - has been testified by tens thousands of architects, designers, constructors, fabricators, and projects owners around the world with following proven advantages:

- excellent mechanical properties at light weight
- fire resistant certified under toughest standards
- weathering and chemical resistance
- rigid and flat yet highly formable
- significant noise and thermal insulating
- cost effective vis-à-vis solid aluminium sheet
- non-toxic and environmentally friendly
- durable exterior coating performance with warranty provided

ACP Cladding vs. Traditional Building Cladding Materials

Shown in below comparisons, mechanical properties of 4mm exterior-class ACP Cladding is as rigid and strong as of traditional solid aluminium, steel, and/or glass cladding materials. And yet, unit weight is much lighter and therefore easier for fabrication and installation:

Because ACP Cladding does not require the use of 100% solid metals in production in order to achieve similar mechanical properties which traditional cladding materials may be able to reach, ACP Cladding is undoubtedly therefore the lightest and most cost-effective solution for architectural and industrial cladding.

Please contact us for full mechanical comparison studies.

To Rebuild or to Renovate?

In addition, stained concrete, cracked masonry, decay color, and other time related problems are inevitable to buildings and will be disadvantageous to their commercial values. With budget, ACP Cladding has been proven the best alternative against other traditional cladding materials. Without budget, ACP Cladding is also proven the easiest and most cost-effective solution for building renovations.

STEEL ASSOCIATED WORKS

Steel construction offers speedy and economical solution to your construction requirements with the flexibility to achieve the maximum in architectural design with anbound limitations.

Qualities of a strenght and permability giving you flexibility in architectural design.

Available in a range of sizes and dimensions to cater from sheds to skyscrapers.

Using the latest technology of softwares for the design of your requirements and computerised machinery to achieve ultimate precision.

STEEL ASSOCIATED WORKS

At Castley Group of Companies we have a dedicated team to assist with your planning and structural requirements no matter how small or extensive the project may be. We will be at your side offering you sound advice and our technical experience.

Product presentation

Building Grade Laminate is used for interior and exterior wall panels, ceilings, partitions and counter tops. Over 300 solid colours, wood grains, oxidations and metal patterns from which to choose. Plus full custom digital capabilities to create wall panels in any visual you desire.

Decorative surfacing refers to a large group of products which are typically laminated. While the most common high pressure laminate (HPL) as increasing number of materials and manufacturing techniques to enlarge the number of affordable designer's choices.

Generally Building Grade Laminate is a high pressure laminate board manufactured under extreme pressure and heat to form a panel with high strength and versatility, suitable for external and interior new- building or refurbishment applications.

Light weight and with a minimum life expectancy of 30years, ARPA represent a good and robust panel for variety of applications.

HIGH PRESSURE LAMINATE CLADDING

Features:

Building Grade Laminate protects the interior and exterior structure wall, against high wear and abuse while allowing create design choices.

Benefits:

Benefits include little or no maintenance, structure wall longevity, resistance to wear, moisture resistance and aesthetics.

Performance capabilities:

A good choice for long lasting interior and exterior wall cladding, because of the durability, scratch impact resistance and hygienically sealed surface.

Material Used:

The interior and exterior wall cladding systems consists of Castley Group of Companies compact laminate either attached to a fuming sub frame or integrate into one of three different aluminium reveal systems.

The vast range of products is expression of an original creativity, enriched by the possibility of reproducing any image, decor or artwork through digital printing technology.

Arpa therefore offers an important service to companies and designers, with a substantial aim: raising corporate culture by creating added value.

The value of creativeness

Arpa operates in the global market by designing optimal solutions. For the growth of the production system it is necessary to approach markets keeping into account the specifics of corporate culture and its values: creativity, optimization of production processes, services a company can offer.

**EXTERIOR BUILDING GRADE LAMINATE /
HIGH PRESSURE LAMINATE CLADDING**

MARBLE CLADDING

Natural stone cladding has been extensively used in many applications;

Anchor technology and other proprietary systems

When specified as handset cladding the marble is fixed/restrained to a suitably constructed, solid backing structure e.g. 7 N/mm² block work or any type framework, using stainless steel cramps and dowels with proprietary stainless steel brackets and angles to provide the required load bearing support.

We successfully undertaken many handset cladding contracts for some of the leading Clients and Main Contractors and offers a full design, supply and installation service, together with effective Project Management, routinely expected on all contracts, to ensure a high quality service and end product. The Company can source and supply a wide range of natural stones from granite and marble, through to limestone, sandstone and slate.

Whilst traditional forms of stone cladding still have an important place in building design, we can advise on projects where more innovative design solutions are sought and has good experience in the supply and installation of stone cladding in resulting in lightweight cladding panels.

TECHNICAL SERVICES

Our Company aims to provide a fully comprehensive service commencing with consultation with the customer to establish their requirements and develop the overall design. This leads to the production of detailed drawings and selection of materials. Coordination of transportation of materials to site to suit programme and finally, on-site installation by our own fully qualified operatives. Our Design Office is computerised using the latest AutoCad programmes to produce high quality specification drawings from site dimensions incorporating all details, Architect's specification and Engineer's requirements. The design and procurement of stainless steel support and restraint fixings for both internal and external facade and cladding projects together with calculations is done on a job specific basis.

CEILING DESIGN & INSTALLATION

In ceiling design, these benefits may be achieved in four key areas:

Material selection: Sustainable ceiling products typically contain a high level of recycled content such as synthetic mineral wool and recycled paper, and recycled metal in suspension systems. Non-recycled ingredients should be renewable, such as binders made of agricultural starches instead of petroleum-based chemicals. And, manufacturing processes should be fuel-efficient and minimize waste.

Indoor environmental quality: Environments designed for comfort and functionality are likely to meet occupant needs long into the future without extensive upgrades or renovations. Ceilings with no or very low formaldehyde and antimicrobial protection can reduce risk of VOC exposure and mold growth. Ceiling panels with high light reflectance can minimize eyestrain (a cause of fatigue) and help conserve energy and cut operating costs by achieving optimal light levels with fewer fixtures and lower-wattage bulbs.

Material performance: Ceiling panels designed to resist wear and abuse are likely to have a longer life cycle, reducing consumption of additional resources for maintenance and repairs.

Sustainable practices: In renovation projects, participating in a ceilings recycling program can divert significant waste from landfills and reduce reliance on natural resources extracted from the land.

Consumers have become increasingly aware of the need to conserve energy, manage raw materials, reduce waste and safeguard against pollutants. In response, many developers and owners now demand buildings that will help save energy, preserve the integrity of surrounding land and assure a clean, healthy indoor environment.

By employing sustainable design, building professionals are taking a broader view than ever before, recognizing that smart decisions at the design stage create structures that will require fewer natural resources throughout their useful lives to remain comfortable, productive and efficient.

* **Suspended & Gipsy Board Ceiling (KNAUF)**

Gypsum as a building material: Gypsum is a versatile material and an essential part of our natural habitat: Karst landscapes are impressive with their widely varied vegetation and numerous morphological manifestations. And man has always used and formed this "natural habitat of gypsum".

* **Living with gypsum:** An increasing number of people want to build inexpensively and improve their living standards. And that is why there is a growing demand for this building material with its fantastic qualities: Gypsum. Our aim is to extract it in an environmentally friendly way and transport it intelligently without harming nature.

* **The skin for the wall:** Gypsum is the ideal surface for all walls because it has the same pH value and the same thermal conductivity as the human skin. Gypsum is 100% mineral and completely free of any material that could impair the sense of well-

being. Gypsum may come into contact the skin without any problems: Gypsum is used both in the field of medicine for the setting of broken bones and in dental technology too. No wonder tradesmen love using Knauf gypsum building materials for interior fittings because they are not obliged to use any type of protective equipment in order to complete their tasks.

* **Climatic walls:** The art of life is based upon inner balance. The secret of a well adjusted indoor climate is, above all, based on a balanced level of humidity. And nature provides us with gypsum as the ideal water manager, capable of storing plenty of indoor humidity in its open, crystalline pores. Gypsum building materials automatically release this humidity if the room becomes too dry. This ecological air conditioning system works as often as necessary and uses absolutely no energy.

We pride ourselves on supplying ranges of the finest wood, laminate and vinyl flooring that are available today. Whether it's office buildings, show homes, hotels or designer homes, you'll find we have a wide variety of shades and widths that will look spectacular once installed. Using meticulously chosen raw materials and manufactured to the highest technical and environmental specifications, our floors possess qualities that bring longevity and a richness of colour.

Solid Collection

For those who prefer a more traditional construction for their hardwood floor, we offer the Solid Collection. Available in a wide range of widths, thicknesses and finishes, we are sure to provide an option which best suits your requirements.

Laminates

If you seek the beauty of a real wood floor but are having difficulty accepting the maintenance issues of the "real thing" then perhaps you should consider our Laminate Flooring. Once installed you will be amazed at how realistic it is, yet unlike a wooden floor it will give many years service without any of the inconvenience caused by sanding and re-sealing. Hygienic and warm underfoot, it will not indent and scratch so easily. It requires the minimum of effort to maintain its good looks. Whether in a busy shopping arcade or in the comfort of your home, our collection offers a range of wood tones, to perfectly compliment your chosen colour scheme.

We are undertaking supply and Installation of the following floor finishes:

- Carpet tiles
- Vinyl
- Hardwood floor
- Rubber
- Raised access flooring
- Acoustic flooring

WOODEN DOORS

Doors increasingly play a strong visual and practical role in interior decoration; they also often act as partitioning between designated areas.

CLEAF possess the sector of know-how required over the course of time in the furniture industry (materials, patterns, colour combinations, finishes), as well as special technological solutions to supply a door system, complete in all elements and functional and stylistic details.

The encounter with the world of doors triggered an extraordinary synergy, in which CLEAF contributed new form and expression to the aesthetic value of the door, increasingly orientated towards design in both stylistic and functional terms.

DIMCO PLC

Easydeas.com.ng
your online electrical appliance store

DIMCO PLC was founded in Cyprus as a private limited company, on 07 June 1966. Originally, specialized in selling gear for electrical installations. DIMCO entered the lighting business in 1976. This is the main activity of the company until today. It became a public limited company (PLC) in December 1999, and entered the Cyprus stock exchange in August 2000.

At present, DIMCO operates 7 stores in Cyprus and imports lighting products from more than 30 European factories. DIMCO has been exporting lighting fittings and lamps to more than 30 countries, since 2003. For this operation a new subsidiary company was registered in 2012, under the brand name "ONE-LIGHT LTD".

In 2012 DIMCO implemented a new concept under the brand name "LEVEL Lighting Studio" which facilitated the ability to contemplate on architectural lighting projects, using advanced and sophisticated techniques.

CFAO NIG

An architectural rendering of a modern, multi-story building with a distinctive facade featuring large, irregular circular cutouts. The building is white with a wooden panel on the right side. In the foreground, there is a parking garage with several cars, including a yellow SUV and a blue car. The scene is set against a bright, clear sky.

INTRODUCING
CASTLEY

- Nearness to Dangote Oil and Gas Refinery
- Close to Shoprite
- Quick accessibility to the proposed fourth mainland
- Good and tiled road network

CASTLEY COURT

DESIGN
& BUILD

WHAT WE OFFER

A Design & Build you might say it's a simple approach to construction. A team working together from start to finish in open communication and purposeful collaboration to deliver otherwise unachievable results. It's the notion that when owners sit at the same table with architects, builders, engineers and estimators, great ideas — the best ideas — are born. And the way is paved for creative solutions to take hold, resulting in costs minimized, schedules streamlined and efficiencies realized.

What is Design-Build?

Design-Build is a construction delivery method that provides owners with a single point of contact for both the design and construction phases of a project. One entity holds single-source responsibility and contractual risk for every aspect of a build — from estimation, assessments and pre-construction to architecture, schematics, engineering, subcontracting, construction and post-construction. This entity, our Design & Build, manages all contracts with companies, such as subcontractors, equipment vendors and materials providers.
